

A VBA application to generate **full year calendar** on EXCEL. The use is simple, once the **generate** button clicked, start for **all worksheets**, checking if on **A1 cell** a value exists if a valid year found generate the calendar for A1 year, if not uses the current year. So imagine you can have unlimited worksheets with the **generate** button click on all worksheets a calendar will be generated. The purpose of this is to 'hold' the calendar data needed separately. For example, can be for your **nutrition** the other for your **drugs** the other for **GP visits** the other for **Tennis results** etc.

Once to try to open the XLSM, you have to enable the macros

By default, is this empty interface

When the user press the **generate** button, the calendars will be drawn to all worksheets like

A	B	C	D	E	F	G
