

The main window

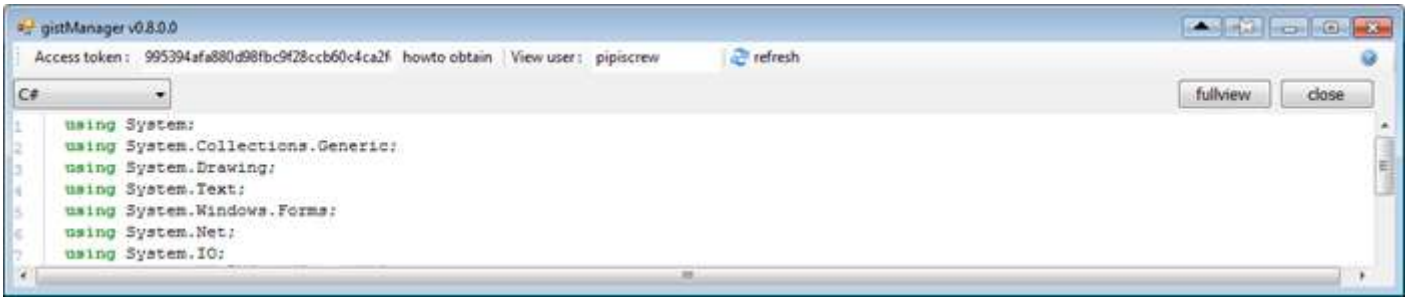

Credentials stored encrypted to a file called `gistManager.db` near application file.

Codes listed on left and right treeviews.

- Left View = as Gist represent it
- Right View = Group all codes by language

When a `code node` double clicked, shows the selected code

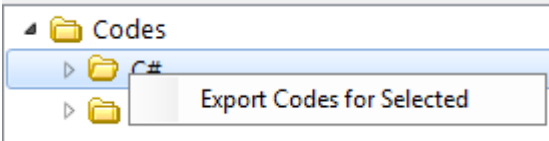

When `add/edit a code`, when `file dropped` from explorer to this panel, automatically reads the file contents :

Description :

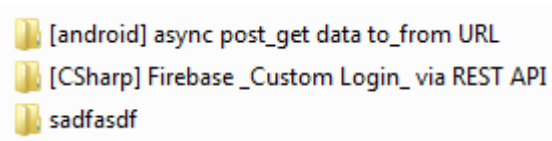

File :

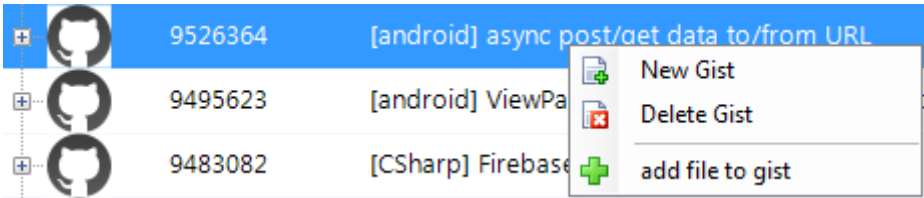

On `right treeview` when code node right clicked, a context menu appears :

when `Export Code for Selected` clicked, stores locally

On `left treeview` when `Gist node` right clicked :

when `code node` right clicked :
