

wordpress2xenforo

User after success import has to go at xenforo admin control panel.

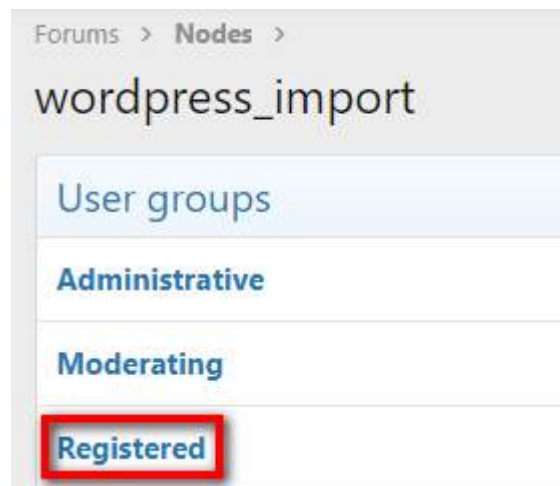

1) Add new node permissions

Find the new **wordpress_import** node and click permissions

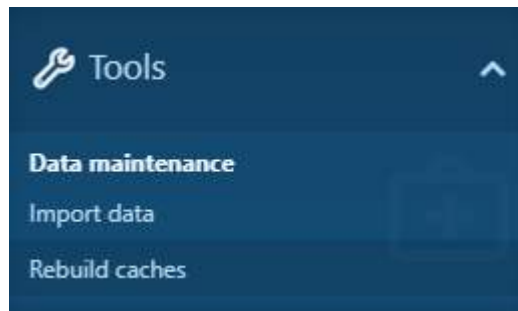

select **Registered** user group

and press **save**

2) Rebuild caches

then user has to **rebuild** these three, click one by one, following the order (checkboxes should be checked) :

- Rebuild threads
- Rebuild forums
- Rebuild search index

A screenshot of a web interface titled 'Tools > Rebuild caches'. It contains three distinct sections, each with a title bar, a configuration area, and a 'Rebuild now' button. The first section, 'Rebuild search index', has a checkbox for 'Delete the index' which is checked. The second section, 'Rebuild threads', has a checkbox for 'Rebuild position' which is checked, with a small '100%' label below it. The third section, 'Rebuild forums', has no visible checkboxes.

Navigate to home page and enjoy.

Free version vs Paid

- import 100 records
- date range cannot be used
- cannot be run on Virtual Machine

Cost : 5 euro

Method : Paypal

License key will be delivered to the buyer Paypal mail.

Contact first at pipiscrew@yahoo.com

The following tables altered

xf_category

xf_forum

xf_node

xf_post

xf_thread

xf_thread_redirect

do the cook to **localhost** dump the tables and upload it as :

```
SET FOREIGN_KEY_CHECKS = 0;
```

```
//your SQL here
```

```
SET FOREIGN_KEY_CHECKS = 1;
```

If is new dbase, better drop the tables and recreate it.
